Strategic Initiatives Unit Work Teams

SIU: The GITA Strategic Initiatives Unit (SIU) supports the design and deployment of strategic technology projects for Arizona. At the inception of an initiative, or at critical stages of a project, the SIU organizes and manages technical resources to create and deliver solutions.

Arizona 2-1-1: The AZ 2-1-1 team manages the statewide 2-1-1 system which facilitates the public's access to community, health and human service and homeland security information and referrals at www.az211.gov.

e-Health: The e-Health team manages the Rural Health Information Technology Adoption (RHITA) grant program supporting the implementation of healthcare information technology and healthcare information exchange among rural healthcare providers. The e-Health team also manages the HISPC – Arizona Health Privacy Project to facilitate the sharing of electronic health records.

AZ3D: In partnership with the Arizona Department of Homeland Security and other state agencies, the AZ3D team is exploring the creation of a statewide visualization platform for Arizona to integrate imagery and numerous datasets with geo-based attributes into a non-technical internet-based viewing environment – or ‘common operating picture.’

PSIC: The Public Safety Interoperable Communications Team (PSIC) is responsible for enabling real-time, interoperable communications between local, county, state, tribal, and federal public safety organizations in the State of Arizona.

Community Partners

Governor's Council on 2-1-1: The Governor's Council on 2-1-1 develops and oversees the implementation of 2-1-1 by defining policies, establishing standards, identifying resources and integrating 2-1-1 with other strategic initiatives.

AZ 2-1-1 Community Advisory Committee: The AZ 2-1-1 Community Advisory Committee, with representatives from local governments, non-profit organizations and private stakeholders, makes recommendations to the Council and advises the 2-1-1 Team at GITA.

Health-e-Connections Steering Committee: AzHeC is a not-for-profit organization whose mission is to lead Arizona's establishment of health information exchange (HIE), and adoption of health information technology (HIT).

Adoption of Standards Collaborative: The Adoption of Standards Collaborative is a multi-state collaborative whose main goal is to establish a “National Health Bridge: Basic Policy Requirements for Authentication and Audit” for providers to access electronic health information across state lines.

EPOC: The Emergency Preparedness Oversight Council (EPOC) oversees overall emergency preparedness within Arizona, consolidates emergency activities across agencies, and assigns responsibilities for activities as part of continuity of government efforts.

AGIC Data Committee: The Arizona Geographic Information Council (AGIC) is Arizona's primary forum and oversight group for geographic information and geographic information technology issues. The AZ3D team will look to AGIC's Data Committee for advice and support from their geographic information system specialists.

PSCC: The Arizona Public Safety Communications Advisory Commission (PSCC) makes recommendations regarding the development of a standard based system to provide interoperability of public safety agencies' communications statewide.

SIEC: The Statewide Interoperability Executive Committee (SIEC) is responsible for coordinating statewide use of the 700 MHz interoperability spectrum, and providing technical and operational working group assistance to the PSSC.
